

CV-Series of Diazo Developer: CV-18 (Micobra-type)

This new series of Diazo Film Developers employs a unique one pass-through Ammonia Vaporizing System. They cannot leak, spill, overload, or leave a residue - and they do not require constant cleaning.

What they do is work perfectly and consistently so that you get perfect copies every time. Guide-Flat Feeding makes them virtually jam-proof. Material is inserted into the leading edge rollers, follows a flat path and exits at the rear. You are never left waiting for the copy that somehow did not make it through.

FEATURES:

- Integrated Automatic Metering Pump - built into the unit
- Variable temperature control: all solid state circuitry
- Ammonia Vaporizing System eliminates ammonia problems
- Can be used in open office environment without venting or plumbing
- Precision-ground, coated rollers for long life, even development and elimination of film scratching
- Guide-Flat Feeding eliminates jams, curling
- All aluminum components
- Separate switches for heat and rollers
- Warranty - 3 months
