

5004C (COLOR) & 5004GS (GRAYSCALE) BOOKSCANNER

The 5004C Advanced Color BookScanner & the 5004GS Grayscale BookScanner from Indus are the latest in available technology for the scanning of bound books and very large scale documents up to 16.53 inches x 24.80 inches at optical resolution of 300, 400 and 600 dpi. They maintain the original condition of a bound book even if it is in a fragile condition. They combine state-of-the-art scan lens, a high quality CCD image sensor and white LED lights, clustered in a mobile strip that follows the scanners movement. A built-in motorized book cradle helps overcome the unevenness of thick books. An optional glass plate helps flatten large documents and books.
