

5005XL C (COLOR) & 5005XL GS (GRAYSCALE) BOOKSCANNER

The 5005XL C Color BookScanner & the 5005XL GS Grayscale BookScanner from Indus are the latest in available technology for the scanning of very heavy bound books and very large documents up 25.0 inches x 35.4 inches at a resolution of close to 400 dpi. They maintain the original condition of a bound book even if it is in a fragile condition. The motorized cradle has variable speed and adjustable contact pressure between glass plate and the book, making it the ideal scanner for the scanning of large bound books that are up to 44 pounds in weight and as much as 10 inches thick. With a state-of-the-art scan lens, a high quality 7500 pixel CCD image sensor and white LED lights, clustered in a mobile strip that follows the scanners movement, the resulting scan quality is superb.
